Log search (houseofisis.com)

Underneath you can search the logs over the past 90 days for a specific email message. In the recipient field you only need to enter the local part of the email address (e.g. 'myname' instead of 'myname@mydomain.com'). With the predicate function you can choose to search on all entered search terms together or only on any of the entered search terms. With the partial function you can choose to include search results that correspond to, but do not fully match the search-string(s) you entered. Partial search isn't available for IP addresses.

Edit route(s) (houseofisis.com)

Underneath you find the route(s) (destination mail server) and their respective delivery order. You have the option to add and delete routes. Also, the list allows you to dynamically move the order of the routes by drag dropping them to the right position in the list.

The domain 'houseofisis.com' has a single route. You're not allowed to delete this route as a domain always needs to have at least one route in order for the filtering machines to deliver the clean emails. ✕
